BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2011 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

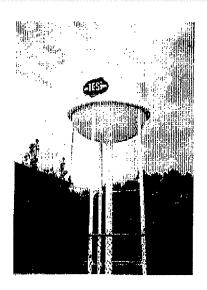

Lakewood Environmental
Public Water Supply Name

	PWS ID# MS0240052
	List PWS ID #s for all Water Systems Covered by this CCR
	e Federal Safe Drinking Water Act requires each community public water system to develop and distribute a consumer affidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR is the mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.
P/c	ase Answer the Following Questions Regarding the Consumer Confidence Report
()	Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
	Advertisement in local paper On water bills Other Direct mail
	Date customers were informed: 6/26/2012
0	CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:
	Date Mailed/Distributed: 6/26/2012
()	CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)
	Name of Newspaper:
	Date Published: <u>f f</u>
()	CCR was posted in public places. (Attach list of locations)
	Date Posted:/_/
O	CCR was posted on a publicly accessible internet site at the address: www. Totalenvironmentalsolutions.com
CE.	RTIFICATION
116	reby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in form and manner identified above. I further certify that the information included in this CCR is true and correct and is sistent with the water quality monitoring data provided to the public water system officials by the Mississippi State artment of Health, Bureau of Public Water Supply.

The Water We Drink - Total Environmental Solutions, Inc. (TESI) is pleased to present our Annual Water Quality Report for the year 2011. This report is designed to Inform you about the quality of your water and the services we deliver to you every day.

Is My Water Safe? Yee, last year your tap water met all U.S. EPA and state drinking water standards. TESI disjointly safeguards its water supplies and once again we are proud to report that our system has not violated a maximum contaminant level (MCL) or any other dinking weter quality standards.

Do I need to take any apecial precautions? Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HiV/Aids or firmune system disorders, some elderly, and infants can be particularly at risk for infections. These people should seek advice about drinking water from their health care provides. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptospondium and other microbiological contaminants are available from the Safe Draiding Weter Hotine at (800) 425-4791.

Where does my Water come from? The water sources for Lakewood Environmental ere as follows:

Well No. 0240052-01

Weil No. 0240052-02 Maintenance shop

Robinson Road off Canal Road

Pascagogle Formation Pescagoula Formation

Source Water Assessment and its availability - A Source Water Assessment Plan (SWAP) is available from the Mississippi State Department of Health for this system. This Plan is an assessment of a delineated area around our listed source through which contaminants, if present, could migrate and reach our source water. It also includes an inventory of potential sources of contamination within the delineated area, and a determination of the water supply's susceptibility to contamination by the identified potential sources.

Why are there contaminants is my Drinking Water? Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water pose a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hottine (800-426-4791). The sources of drinking water (both tap and bottled) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive meterial, and can pick up substances resulting from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural avestock operations, and wildlife. Inorganic contaminants, such as satis and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining or farming; posticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are byondusts of industrial propasses and palminam and can also come from the contaminants, which are byondustring of the fire result of oil and gas production, and mining activities. In order to ensure that your tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved? In order to maintain a sale and dependable water supply, we constimute need to make improvements that will benefit all our outstomers. If you have a particular queetion about your water supply, please contact Brannan Corley @ 800-866-3581.

Additional information for Lead - If present, elevated levels of lead can cause serious hasith problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Lakewood Environmental Water supply is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your lap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is evaliable from the Safe Drinking Water Hotline or at http://www.spa.gg//cefeweter.lead. The Mississippi State Department of Health Public Health Leboratory offers lead testing for \$10 per sample. Please contact (801) 578-7582 if you wish to have your water tested.

A Message from MSDH Concerning Radiological Sampling - In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007—December 2007. Your water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) auspended analyses and reporting of radiological compliance samples and results until further notice.

Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. The Bureau of Public Water Supply is taking action to reactive this issue as quickly as possible. If you have any questions, please contact Melissa Parker, Deputy Director, Eureau of Public Water Supply at (601) 576-7518.

Monitoring & Reporting of Compilance Data Violations - We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards.

Beginning Jenuary 1, 2004, the Mississippi State Department of Health (MSDH) required public water systems that use chlorine as a primary disinfected to monitor/test for chlorine residuels as required by the Stage 1 Disinfection By-Products Rule. We did complete the monitoring requirements and found no Maximum Residual Disinfectant Level (MRDL) violations.

The state of the s		, ,
Residuals Estapling Period Rang	a (Low/High) NGL RAA' Units RAA Osta RAA Your Water	Typical Bourge
Chisting lax Cap 2011 0 50		771177777777777777777777777777777777777
The state of the s	7 1.26 4.0 #\d/L 2010 0.77	Water additive used to control misropes
*RAA = Running Annual Average		

The water system was tested a minimum of one (1) monthly sample in accordance with the Total Coliform Rule. During the monitoring period covered by this report, the following detections were noted: There were NO positive bacteriological samples during the monitoring period of January 1st to December 31st, 2011

In the table below, we have shown the drinking water contaminants that were detected during the calendar year of this report. The presence of contaminants does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from tasting done during the calendar year of this report. The EPA or the State required us to monitor for certain contaminant tees then once per year because the concentrations of these contaminants do not change frequently.

Thank you for allowing us to continue to provide your family with clean, quality safe drinking water this year. In order to maintain a sefe and dependable water supply, we sometimes need to make improvements that will benefit all of our customers. Please call our office if you have any quastions.

We at TESI, work around the clock to provide top quality drinking water to every tap of every customer of the i,skewood Environmental Water System. We ask that all our customers help us to protect and conserve our water sources, which are the heart of our community, our way of life, and our obliders buture.
